Test case for **Snapchat**

Test Case ID: BVA03
Webpage URL: https://accounts.snapchat.com

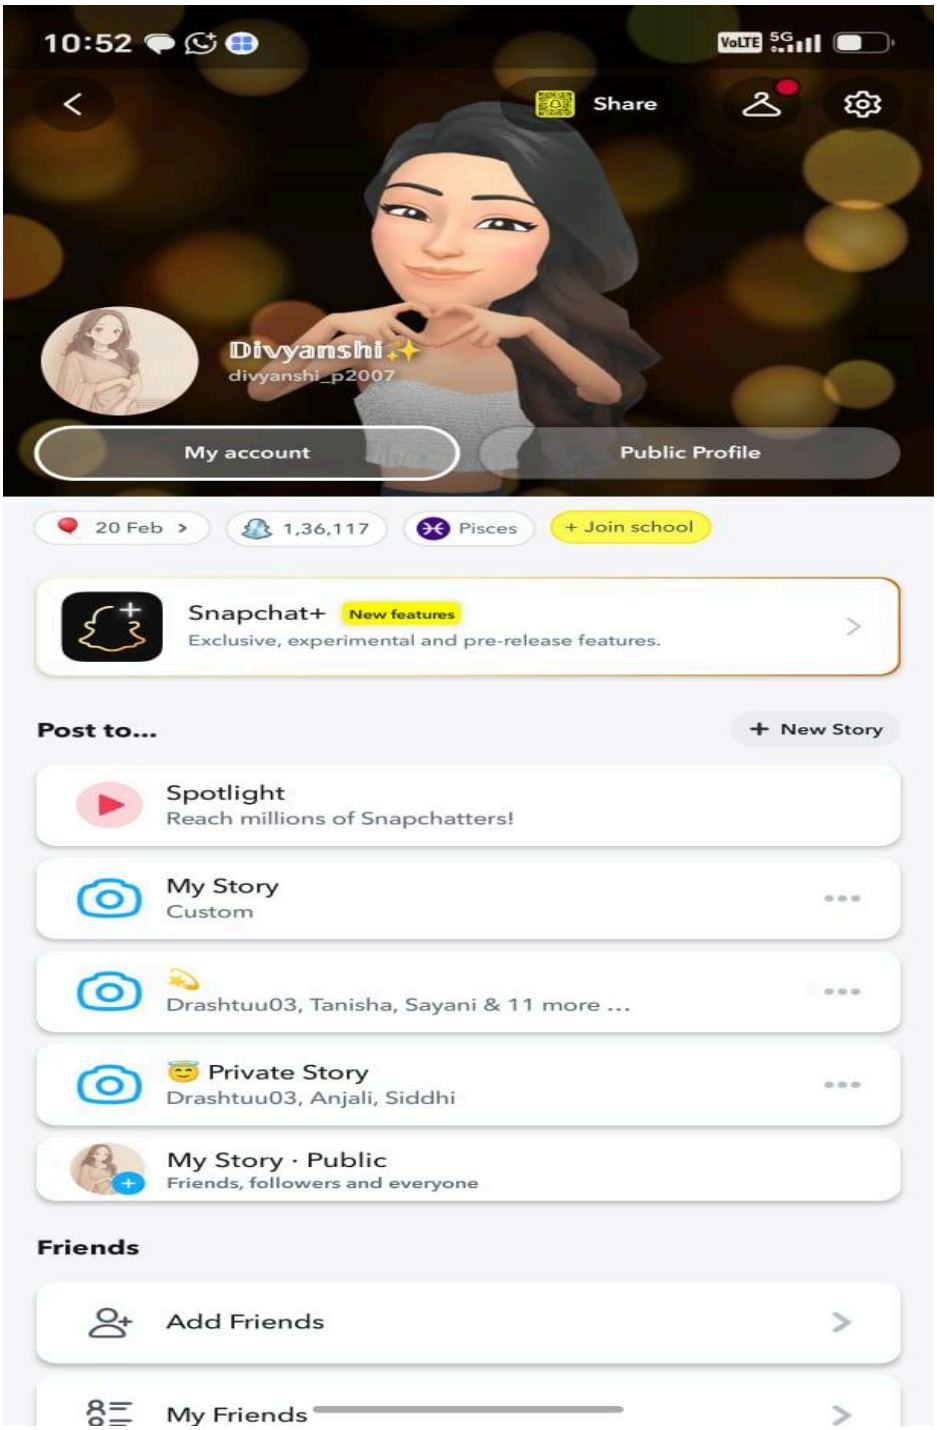

- Login page

- Enter Username :

- Login Successfull :

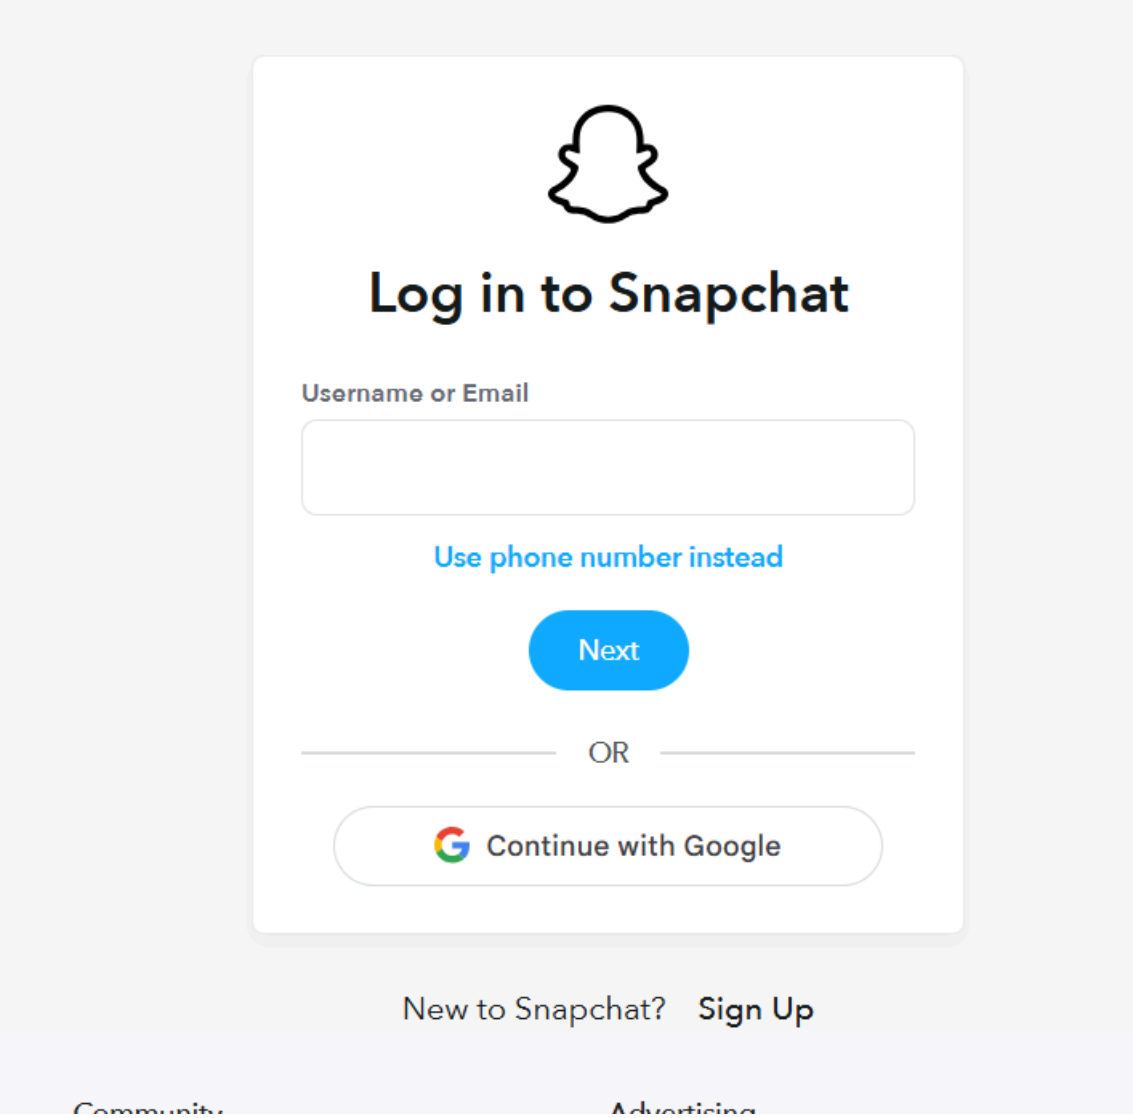

Test case BVA03 : Positive Login test

(Verify username just below maximum)

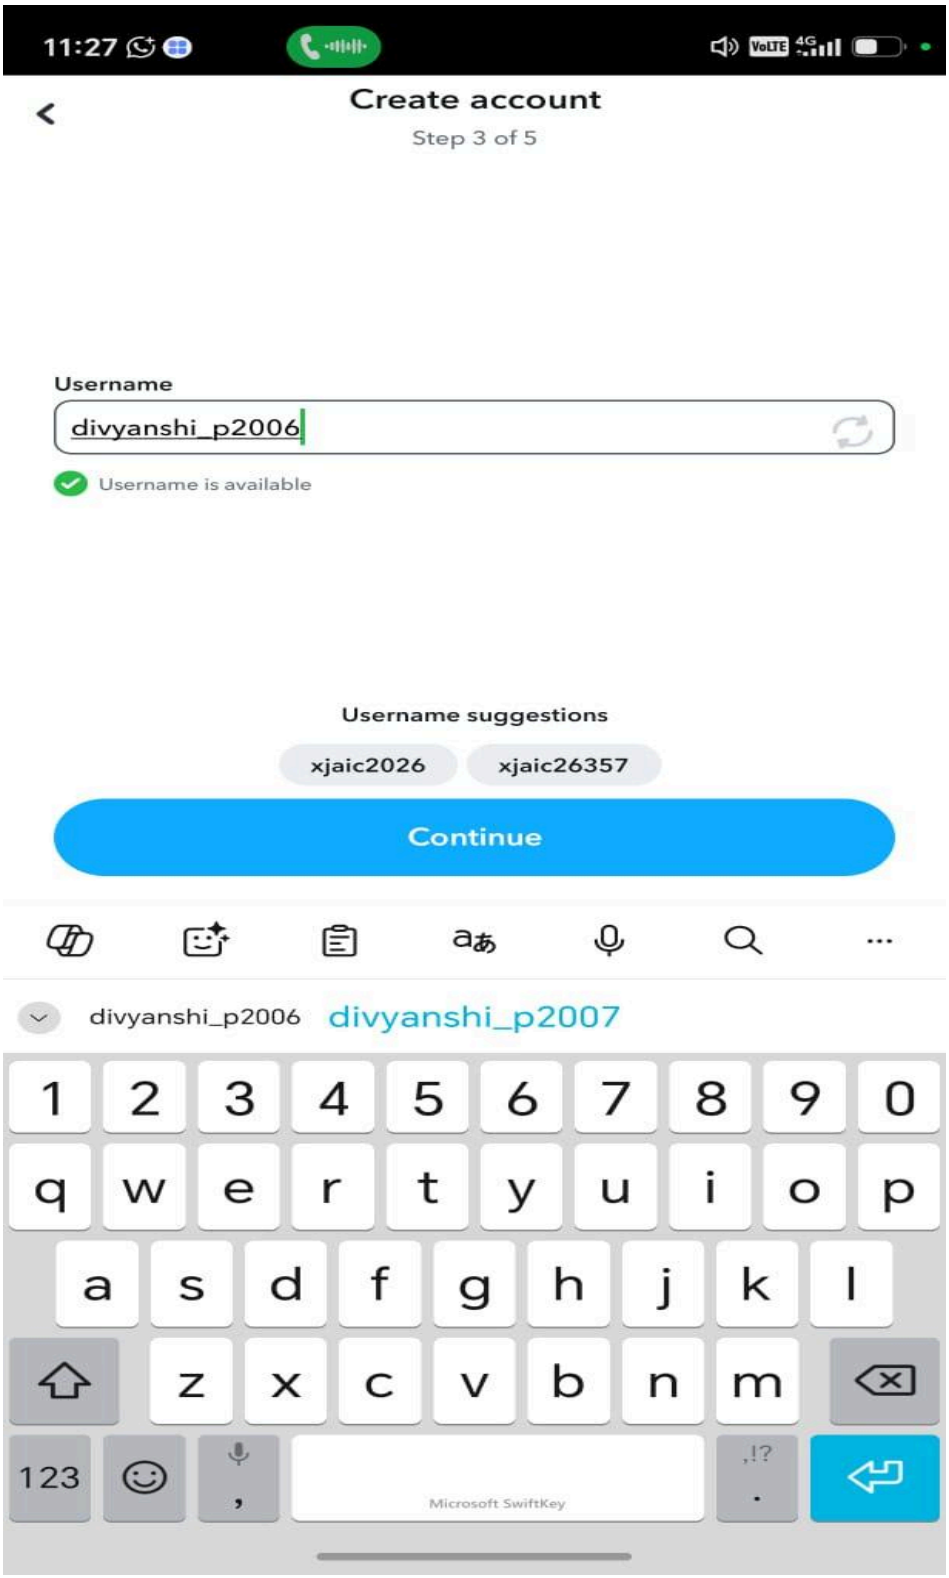

1. Open Login
2. Enter username
3. Click Login

Test Case ID: BVA04

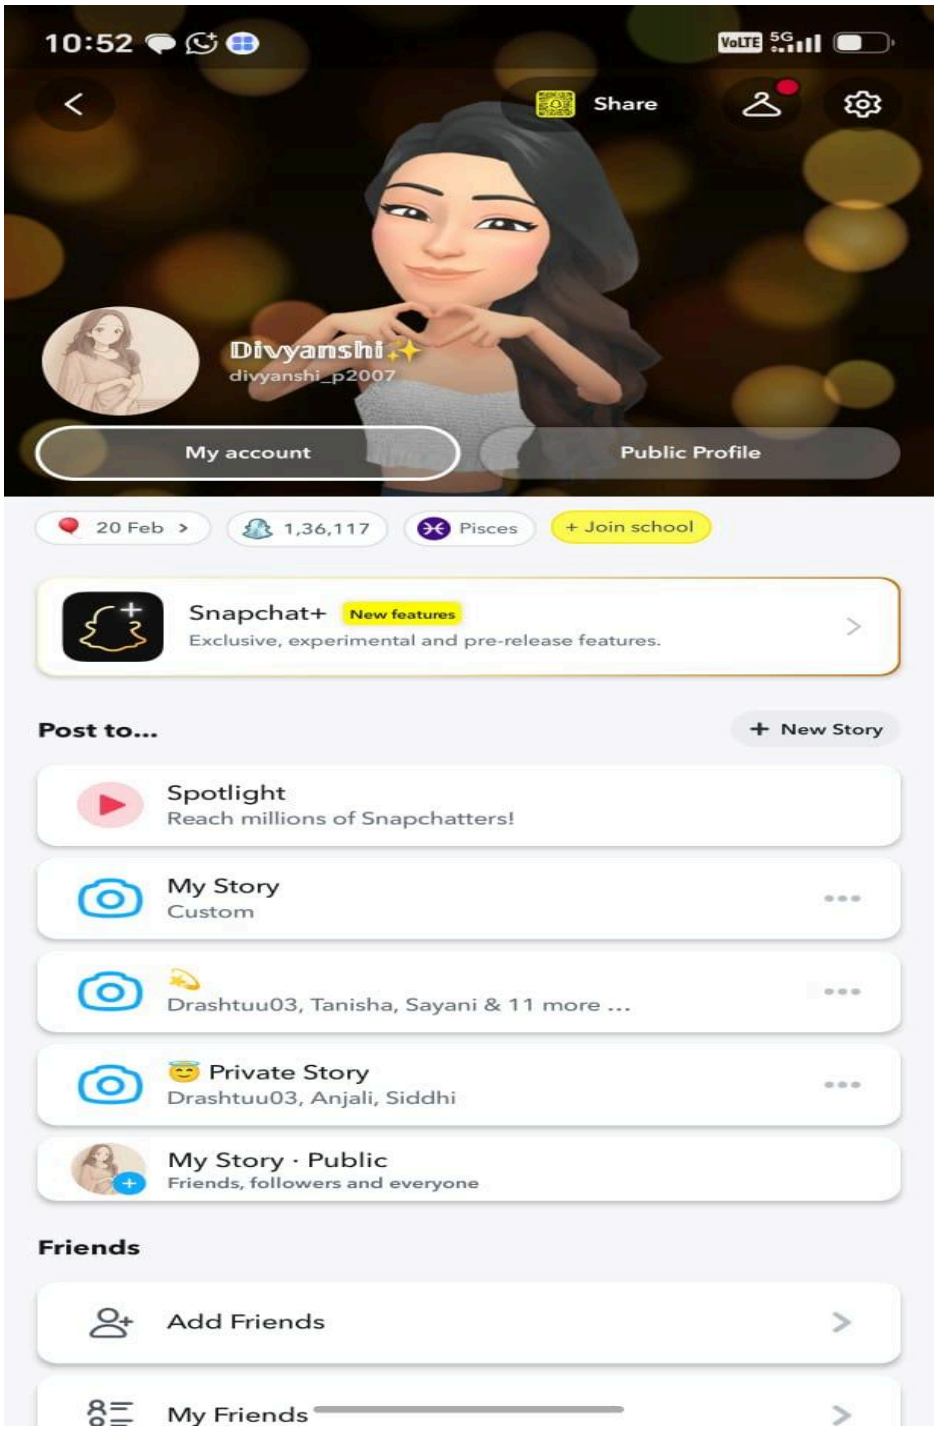

- Login page

- Enter Username :

- Login Successfull :

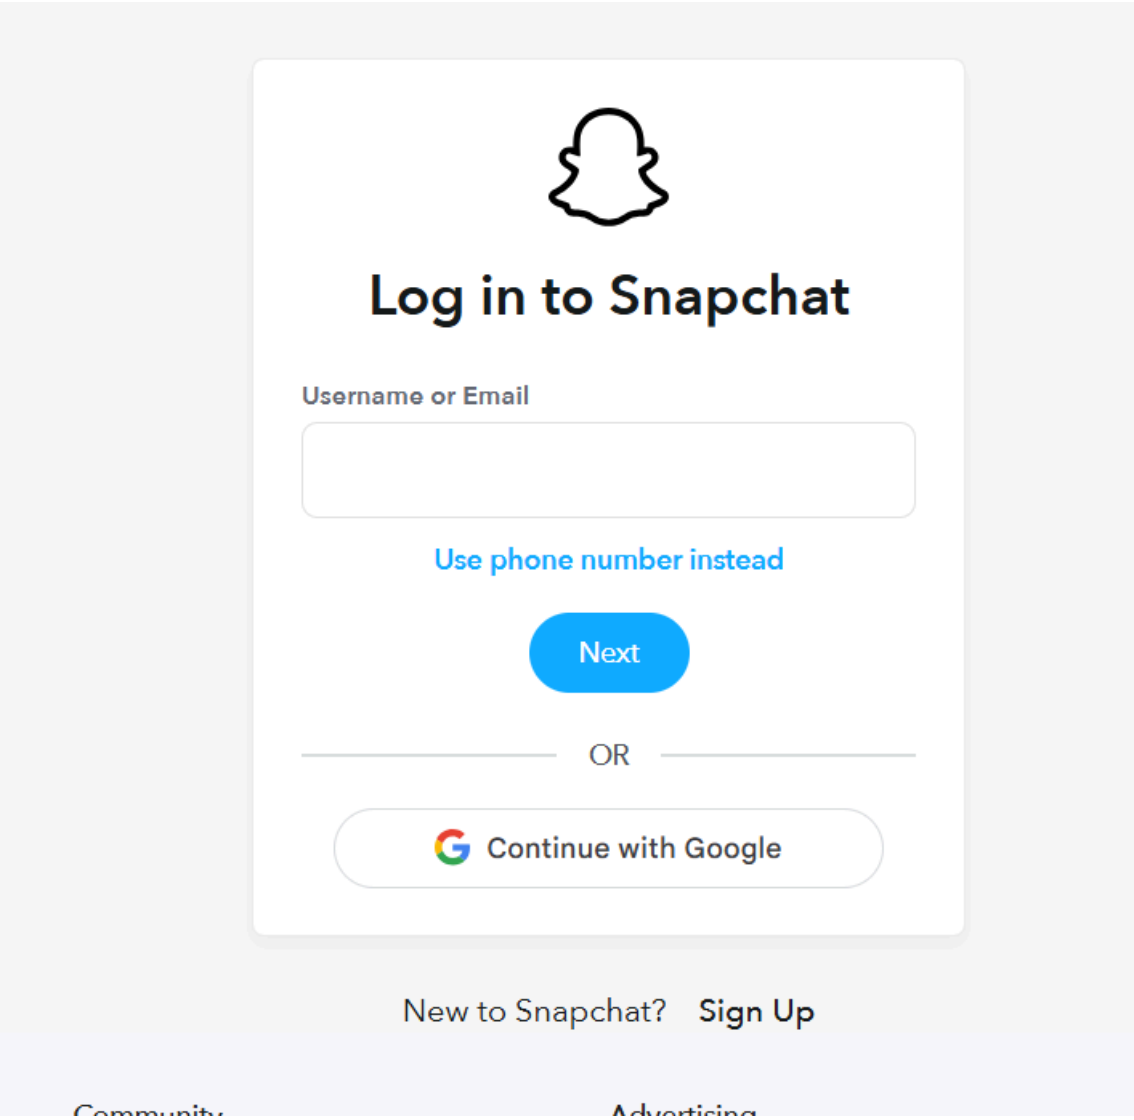

Test case BVA04 : Positive Login test

(Verify username at maximum limit)

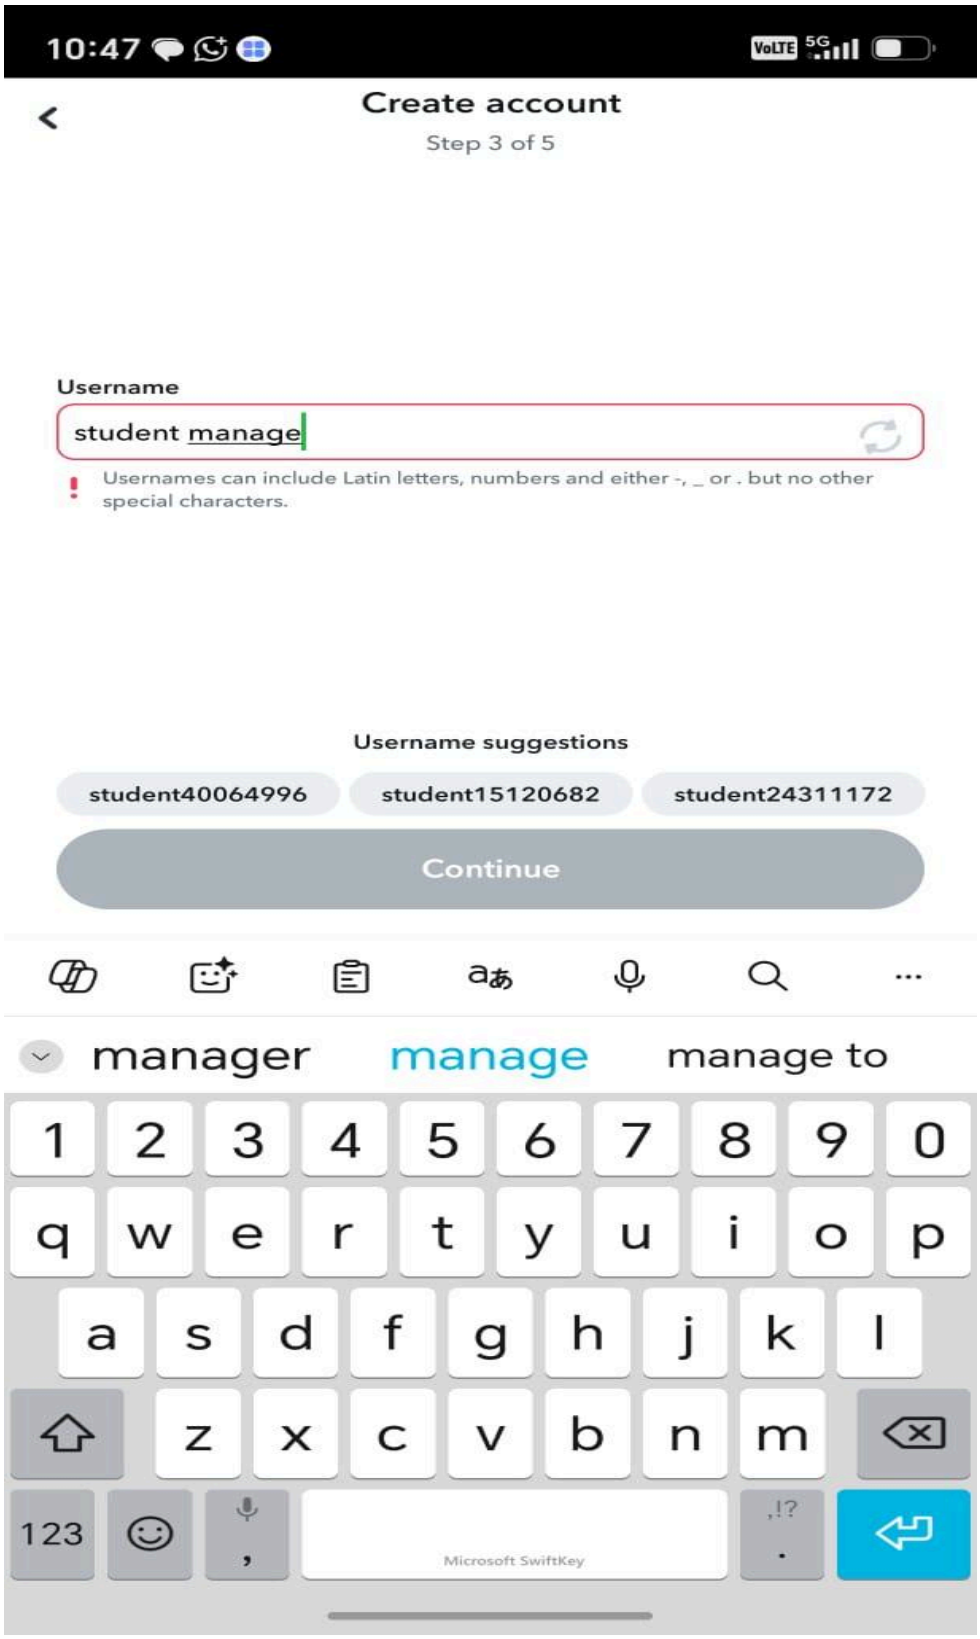

1. Open Login
2. Enter username
3. Click Login

Test Case ID: BVA05

- Login page :

- Enter Username :

Test case BVA05 : Negative Login test

(Verify username above maximum limit)

1. Open Login
2. Enter username
3. Click Login

Summary of test case

Summary Of Test Results

Total Test Cases - 5
Passed - 5
Failed - 0
Pass % - 100%

Bug Reports :

Field	Details
Bug ID	N/A
Defect Title	No Defect Found
Module Name	Snapchat Sign Up

Feature Affected	Username Validation
Defect Description	Username validation working correctly
Defect Type	Validation Check
Severity	Low
Priority	Low
Environment	Windows 11 / Chrome
Reported By	Divyanshi Panchal

Date Reported 25/08/2026

Report

• Conclusion and Recommendations :

Pass Rate: 90% – Needs Improvement

Issues Found and Their Solutions

1. Username Length Validation

Issue: Users entering usernames with less than 5 characters or more than 15 characters were unable to proceed with registration.

Recommendation: Display a clear validation message such as **"Username must be between 5 and 15 characters"** to help users correct their input.

2. Blank Username Submission

Issue: Some users may attempt to submit the registration form without entering a username.

Recommendation: Show a mandatory field message such as **"Username is required"** and prevent form submission until a valid username is entered.

3. User-Friendly Error Messages

Issue: Generic validation messages may confuse users during the sign-up process.

Recommendation: Provide specific and easy-to-understand error messages for each validation rule to improve usability.

5. Automated Validation Testing

Issue: Manual testing can be time-consuming and repetitive.

Recommendation: Automate BVA and Equivalence Partitioning test cases using Selenium to improve testing efficiency and reduce human errors.
