Module Name	Login Module
Feature Affected	User Authentication
Defect Description	System allows login without mandatory credentials.
Defect Type	Functional Bug

Severity	High
Priority	High
Environment	Windows 11, Chrome Browser
Reported By	Divyanshi Panchal
Date Reported	03/08/2026

conclusion

Conclusion and Recommendations :

Pass Rate: 90%, Minor Improvements Required

Issues Found and Their Solutions

1. Improve Network Error Handling

Provide proper error messages when internet connectivity is lost during OTP verification to prevent application freezing.

2. Enhance OTP Validation

Implement stronger OTP validation and expiry handling to improve login reliability and security.

3. Improve User Feedback Messages

Display clear and user-friendly messages for invalid mobile numbers, incorrect OTPs, and authentication failures.

4. Optimize Login Performance

Reduce response time during OTP verification and login processing for a smoother user experience.

5. Strengthen Security Measures

Implement additional security mechanisms such as device verification and secure session management to protect user accounts
